PRESS RELEASE

Expandable CS-1 Sifter Increases Capacity

Sifter Parts & Service, Inc., Wesley Chapel, FL, is the current manufacturer of the stacked deck Model CS-1 Gyrotory Sifter, formerly known under the names of Allis Chalmers, Ferrell Ross, and Blount. The CS-1 Sifter is an all metal machine capable of providing from one to four separations of any dry product from 1/4 inch down to 400 mesh. This sifter has the ability to screen up to 50,000 pounds per hour and its passive, gentle gyrotory motion keeps the product in constant contact with the screen for maximum capacity. The CS-1 can provide from 5 square feet up to 35 square feet of screening surface simply by adding additional screen decks. This is all done in a 4' x 4' footprint, minimizing the space required to operate the sifter.
