

CS-1 Sifter Seals & Gaskets

Optional Gasket Material — Metal Detectable FDA Approved Silicone

FDA approved silicone seals for the CS-1 sifter that are both magnetic and metal detectable. The blue color of the seal aids in identification and the new magnetic properties ensure the seal will attach to an inline magnet or set off a metal detector. This new silicone gasket compresses equally as well as the standard gum rubber so you get the same no leak performance with the added benefits of a vibrant color and magnetic properties.

Corner Seal ... (4) required per deck
Part# G201-00228-MD

Lip Seal ... stocked in 3ft. Pieces (3) required per deck
Part#G201-00251-MD

Plain Seal ... stocked in 3ft. Pieces (3) required per deck
Part#G201-00234-MD

Tail Seal ... (1) required per deck
Part#G201-00243-MD

Optional FDA Approved Red Silicone Corner Seal

FDA approved red natural silicone corner seals for the CS-1 sifter. The natural red color of the silicone helps make identification easier. This new silicone gasket compresses the same as the standard gum rubber gasket so you get the same no leak performance as well as the added visibility with the vibrant red color.

Red Corner Seal ... (4) required per deck
Part# G201-00228-R

We also offer custom metal detectable gaskets!

Colored & Metal Detectable Screen Cleaners

Cleaner Balls

Sifter Parts & Service, Inc. offers a wide variety of cleaner balls to fit any sifting application. Sifter balls and cubes work inside screen decks to prevent the screens from clogging with product or “blinding.” Screen blinding prohibits the product from flowing freely through the screen and leads to a loss in sifter capacity along with an increase in sifter tailings or overs. Sifter Parts & Service carries the following sizes and types of cleaner balls:

Stock Sizes

Balls available in diameter sizes: 5/8”, 3/4”, 1”, 1-1/8”, 1-3/8”, 1-5/8”, 2”; other sizes available upon request.

Stock Materials

Polyurethane – The most abrasion resistant and longest lasting ball on the market. Extremely oil, moisture, and chemical resistant. FDA approved. Available non-magnetic & with a T430 magnetic stainless steel core.

Metal Detectable Polyballs – The best food grade metal detectable ball on the market!

Sifter Parts & Service has answered our customers’ demands for a polyurethane ball that will not pass through magnetic separators or metal detectors. The magnetic stainless steel core provides assurance that any screen failure will be caught and remedied before product ever leaves the plant. Many other “metal detectable” balls on the market do not have enough mass to effectively set off a metal detector once they have been worn down. SPS’s metal detectable balls will work every time because the mass of the stainless steel core never changes. Couple the stainless steel core with the abrasion resistance of polyurethane and you have the longest lasting metal detectable ball on the market! Call for current pricing.

(FDA approved color molded in dies are available in: Blue, Red, Purple, Green or Black)

(1/2” poly cube & 1/2” ~ 2” Poly Ball with Steel Core)
